D FOAM

ANTI FOAMING AGENT

- Silicone free
- Cancels the foaming power of firefighting foam
- Acts on foaming solutions

D FOAM

ENVIRONMENT

D FOAM is a silicone free product, it is chemically inert and does not alter the treated liquid. It is perfectly suited to the operation of a sewage treatment plant.

EFFECTIVENESS

D FOAM has been especially designed as an antifoaming agent to abate firefighting foams. After Low, Medium or High expansion tests, or after a training exercise, or after the accidental triggering of a fire extinguisher system, **D FOAM** is perfectly suited to the abatement of firefighting foams. Thanks to this agent, the area invaded by foam can be cleaned quickly and returned to its previous state.

D FOAM has a durable effect, even when the environment is subjected to powerful mechanical forces. Thus the foaming power is eliminated and the solution with a concentration of surfactants stops generating foam. This property is especially necessary in the event of accidental spillages; excess foam can overflow and disrupt the operation of sewage treatment stations.

PERFORMANCES

USE:

- Applicable on existing synthetic or protein firefighting foam
- Applicable directly into the foaming solution to prevent discharges from foaming in sewage treatment station
- Can be used with a high-pressure appliance, hoses in the spraying position with in-line injector, medium-expansion nozzle or portable proportioners

FEATURES:

- Usable from 1% to 6% depending on the use

1-year warranty

THEY HAVE CHOSEN D FOAM:

Chemical and petrochemical industries, nuclear plants, logistics warehouses and many others.
